

Querri

The Simplest Way to
Talk with Your Data.

Eliminate Chargebacks & Raise Your

PERFECT ORDER RATE

with AI-Powered Automation

Querri automates daily dashboards, consolidates data from all your systems, and highlights order issues before they turn into chargebacks, penalties, or delays.

The Challenge

Perfect Order Rate (POR) depends on flawless execution—on-time delivery, complete and undamaged orders, and accurate documentation. But tracking all these factors means juggling data from order systems, barcode scanners, warehouse platforms, and more. One missing piece, one unnoticed delay, and you're paying for it.

The Solution

Querri automates cross-system data integration and delivers custom, hands-free dashboards that surface the most important insights—so you can fix order issues before they cost you.

The Outcome

Higher Perfect Order Rate & Reduced Chargebacks

Unified data and automated anomaly detection, allows logistics teams to catch and fix order issues early, reducing chargebacks, penalties, and OTIF failures.

Increased Operational Efficiency & Cost Savings

Eliminate manual data wrangling by automating data integration and analysis, helping logistics teams streamline workflows, optimize inventory, and cut costs.

Stronger Customer Satisfaction & Competitive Advantage

Highlight only the issues that matter, helping logistics teams stay ahead of problems instead of reacting to them.
